---

## Managing Backup Jobs

### Selecting a Job

- Choose an existing job or create a new one.
- After selecting a job, you can:
  - **Rename:** Change the job's name
  - **Source/Target:** Set source and destination folders
  - **BackupType:** Choose full or differential backup
  - **Backup:** Run the backup job
  - **Reset:** Reset job settings
  - **Delete:** Remove the job
  - **Back:** Return to the previous menu

### Creating a Job

- Enter a unique name.
  - Set source and target folders.
  - Configure backup type, then run the job.
- 

## Running Backups

### Single Job

- Select a job, then choose **Backup**.
- The result (success/failure) is displayed.

## Multiple Jobs

- Use the spacebar to select several jobs.
  - Press **Enter** to run all selected jobs.
  - The status of each job is shown.
- 

## Options Menu

- **Select language:** Switch between English and French
  - **Log paths:** View log and status file locations
- 

## Exiting

- Select **Exit** from the main menu to close the application.
-
